Issue 11 - Spring 2017

A quarterly newsletter offering insights into electronic payments news, trends and software solutions. Highlights for this issue include:

| **mPOS Support** | **Success Stories** | **Also of Interest** |

Integrated mPOS Support

Merchant bottom lines are connected to consumer experience. The rapid adoption of smartphones and tablets as a potential POS delivery channel in virtually every merchant category is a fact. Support of mPOS technology has become an assumed capability of any full service financial institution. mPOS is a game changing solution for large and small merchants interested in increased business efficiency, sales, and customer retention.

CSFi supports multiple mPOS solutions supporting EMV CHIP + PIN and NFC technologies as well as integration with real time inventory management and existing payment and specialized business software. Retailers are turning tablets and phones into cash registers and mini ATM's, facilitating payment and check out regardless of the consumer's location.

Success Stories

[Data Center Inc. Live with SWITCHWARE® G4](#)

Hutchinson, KS: Data Center Inc. (DCI) has now completed the conversion to SWITCHWARE® G4 to manage a network of multi-vendor ATMs for nearly 150 banks and financial institutions throughout the United States. The selection of SWITCHWARE G4 with Sentinel™ Alert Notification System to drive all of its customers ATMs ensures the peak performance and security of this critical delivery channel, resulting in increased operating efficiency, profitability and cardholder satisfaction.

[DFCC Bank to Implement Cardless ATM Withdrawals](#)

Colombo, Sri Lanka: DFCC Bank customers will soon be able to generate cardless cash payments to other individuals from any of its SWITCHWARE® P2P supported ATMs. With the Implementation of CSFi's SWITCHWARE cardless P2P solution, the bank will allow its cardholders to transfer funds to virtually anyone whether or not the recipient has a bank account as long as they have access to one of the bank's SWITCHWARE driven ATMs.

Also of Interest

G4 Network Denial Rules

It is now easier than ever for EZswitch® and SWITCHWARE® card issuers to build and implement Network Denial Rules that can reject transactions based on any values in the ISO 8583 transaction message sent by the EFT network. This highly flexible component provides immediate protection against a wide range of possible fraud attempts based on a combination of data elements sent from the EFT network.

- Block isolated merchants or merchant categories
- Block transactions originating from outside the country
- Block all transactions from particular state where a PIN value is not found and more...
